science	professor	title	year	school	subject	total	impact	publications	affiliations	toys	reasoning	w	w
Mathematics	Deena Schmidt	Associate Professor of Mathematics & Statistics		Cornell University (2007)	Mathematical biology, applied probability, networks (neuro/epi), population genetics	4	31	Sleep-wake dynamics in mammalian development (2024); Stochastic models in neuroscience and epidemiology; NSF and Simons Foundation funded network research	Mathematical Biology Group; Integrative Neuroscience Program;	Computational biology software, network analysis tools, HPC	TechWise Program director; math+computing+data science bridge; Google partnership; accessible to	www	www
Mathematics	Minggen Lu	Professor of Health Analytics & Biostatistics	2010		Biostatistics, health analytics, nonparametric regression, survival analysis, longitudinal data			Advanced statistical methods for high-dimensional biomedical data Panel count data analysis in epidemiology Machine learning approaches to health analytics and prediction	School of Public Health	Statistical computing, HPC, ML platforms, biostatistical tools	Health analytics+ML; bridges math+computing; high-dimensional data methods		www
Mathematics	Thomas Quint	Foundation Professor of Mathematics & Statistics; 2025	1996	Stanford University (1988)	Game theory, mathematical economics, graph theory, Shapley values	2	20	Measures of Powerlessness in Simple Games; Evaluating Presidential Elections Using Game Theory; ~30 journal articles and 2 books on game theory		Computational software			www
Computing	Alireza Tavakkoli	Associate Professor of Computer Science & Engineering	2023	University of Nevada, Reno (2009)	Computer vision, robot vision, VR/AR/MR, biomedical imaging, remote sensing	200	2048	Guided/Unguided Conditional Diffusion for 3D Point Cloud Generation (2025); Bayesian Graphical Models for Joint Degeneration Analysis (2024); Feature Representation for Retinal Disease Detection	Computer Vision Laboratory (CVL); Integrative Neuroscience Faculty	GPU clusters, VR/AR headsets, 3D scanners, medical imaging systems, cameras	BRAIN Core ML as a service	www	www
Computing	Anikita Shukla	Assistant Professor of Computer Science & Engineering	2024	IIIT-Delhi (2021)	Computer vision, deep learning, geometric methods, AI for science, AI for wildlife conservation	30	533	XPRIZE Rainforest winner ($5M, 1st place); Polynomial Implicit Neural Representations (CVPR 2023); Tiger re-identification; Geometric priors for ICF generative models (NeurIPS 2021 workshop)		GPU clusters, cameras, imaging sensors	AI for Science focus; postdoc at ASU; XPRIZE Rainforest team; open to undergrads; directly relevant to ML research	www	www
Computing	David Feil-Seifer	Associate Professor of Computer Science & Engineering	2013	USC Viterbi (2011)	Socially assistive robotics, human-robot interaction, robotics for ASD intervention	45	167	Defining Socially Assistive Robotics (seminal work); Toward SAR for Augmenting ASD Interventions; Benchmarks for evaluating socially assistive robots	Social Robotics Lab	Social robots (NAO, Pepper-type), sensors, actuators, eye-tracking, ML hardware	Exceptional undergrad mentoring (100+ undergrads); motion capture system; accessible	www	www
Computing	Emily Hand	Assistant Professor of Computer Science & Engineering	2018	University of Maryland (2018)	Computer vision, human perception, ML, facial recognition, assistive technology	28	120	Transformation of face recognition technology; Wearable devices for facial recognition; Prior positions at NASA Ames, JPL, Naval Research Lab	Machine Perception Lab; Integrative Neuroscience Faculty	GPU clusters, cameras, wearable prototyping, ML infrastructure	ML/vision with social impact; NASA background; open to undergrads	www	www
Computing	Feng Yan	Assistant Professor of Computer Science & Engineering	2016	College of William and Mary (2016)	ML systems, deep learning, neural architecture search, federated learning, serverless computing	77	2275	Noctua: Automated Fine-grained Consistency Analysis (EuroSys 2024); Gradient similarity for large-scale training (NeurIPS 2021); Gradient compression for DNN training (SOSP 2021)	Intelligent Data & Systems (IDS) Lab; $20M NSF Wildfire project	GPU/TPU clusters, cloud computing infrastructure, distributed systems	ML systems; leads ML on $20M NSF wildfire project; directly relevant to Computing olympiad	www	www
Computing	George Bebis	Foundation Professor of Computer Science & Engineering		University of Central Florida (1996)	Computer vision, image processing, pattern recognition, machine learning, evolutionary computing	39	200	On-road vehicle detection: a review (934 citations); Vision-based hand pose estimation: A review (682 citations); 3D point cloud classification and mammography analysis	Computer Vision Laboratory (CVL)	GPU clusters, cameras, image sensors, ML infrastructure	Major CV lab; GPU access; open to undergrads; directly relevant to Computing olympiad	www	www
Computing	Hao Xu	Associate Professor of Electrical & Biomedical Engineering	2016	UNR College of Engineering	Autonomous systems, intelligent control, machine learning, cyber-physical systems, unmanned aircraft	63	1349	Research in intelligent control and autonomous systems LiDAR-based applications and intelligent transportation systems CREDIT+: Advancing Data Analysis for Mission-	EBME; IEEE	LiDAR systems, UAS platforms, autonomous vehicle testbed		www	www
Computing	Hung Manh La	Associate Professor of Computer Science & Engineering	2014	Oklahoma State University (2011)	Robotics, autonomous systems, multi-robot control, infrastructure inspection, wearable computing			A Climbing Robot for Steel Bridge Inspection (J Intelligent Robotic Systems); Agile robotic inspection: bicycle-like approach (J Field Robotics 2024); Adaptive Flocking Control of Multiple UGVs by UAV	Advanced Robotics & Automation (ARA) Lab	Mobile robots, UAVs/drones, climbing robots, wearable sensors, bridge inspection platforms	Hands-on robotics; award-winning bridge inspection robots; field experience	www	www
Computing	Jun Zhang	Assistant Professor of Mechanical Engineering	2018	UNR College of Engineering	Control theory, robotics, smart materials, artificial muscles, soft robots, assistive biomimetic systems	200	3384	Robotic Artificial Muscles: Current Progress and Future Perspectives Compliant, Large-Strain, and Self-Sensing Twisted String Actuators Three-Dimensional Hysteresis Modeling of Robotic	ME; IEEE; ASME	Smart materials testing, soft robotics fabrication, actuator testing		www	www
Physics	Daniel Trugman	Associate Professor of Physics; of Geophysics	2022		Seismology, earthquake rupture, ML in seismology, earthquake nucleation, induced seismicity	92	928	GrowClust: software for optimizing earthquake hypocenter locations Machine learning approaches to earthquake source characterization Earthquake early warning methodologies	Geological Sciences; Nevada Seismological Lab	Seismic waveform analysis, GrowClust software, ML platforms	ML in seismology; new faculty (2022); potentially accessible	www	www
Physics	Hiroshi Sawada	Associate Professor of Physics	2012	Osaka University (est.)	HED physics, short-pulse laser-matter interactions, laser-driven particles, ICF, x-ray diagnostics	3	125	Ultrafast plasma dynamics in laser-irradiated nanowire arrays (Sci Reports); Magnetized fast isochoric laser heating (Nature Comms 2018); Ultrafast 2D imaging of fast electron transport (Rev Sci Instrum 2023)	HED Physics Group; Zebra Pulsed Power Lab	Zebra pulsed power machine, high-power lasers, x-ray cameras, plasma diagnostics	Assessible.	www	www
Physics	James Hanna	Associate Professor of Mechanical Engineering		UNR College of Engineering	Classical mechanics, nonlinear dynamics, elastic structures, soft matter physics	18	63	Nonlinear dynamics of elastic rods and filaments Classical mechanics of soft structures Elastic instabilities and buckling phenomena	ME	High-speed imaging, mechanical testing	Interesting research.	www	www
Physics	Jeongwon Park	Associate Professor of Electrical & Biomedical Engineering	2019	UNR College of Engineering	IoT sensors, nanotechnology-enabled flexible electronics, nanoelectronics, semiconductors, smart manufacturing	98	1597	Over 84 peer-reviewed journal articles on IoT and nanoelectronics Flexible hybrid electronics and IoT sensor applications Additively manufactured electronics and smart	EBME; IEEE	Additive manufacturing, IoT sensor fabrication, flexible electronics testing		www	www
Physics	Lei Cao	Associate Professor of Mechanical Engineering	2016	UNR College of Engineering	Materials science, phase-field modeling, microstructure evolution, titanium alloys, mechanical properties	31	3296	Twin boundary engineering through cyclic cross-phase-boundary thermomechanical processing Phase-Field Simulations of alpha Colony Formation in Titanium Alloys Understanding microstructure evolution in metallic	ME; ASME	LAMMPS molecular dynamics, phase-field simulation, SEM	Receptive.	www	www
Physics	Matteo Aureli	Associate Professor of Mechanical Engineering	2013	UNR College of Engineering	Fluid-structure interaction, vibration and dynamics, smart materials, multiphysics modeling	16	79	Finite Amplitude Underwater Flexural Vibrations of Cantilevers Harmonic oscillations of a lamina in viscous fluid near a solid surface Shape-morphing cantilever oscillations in	ME Graduate Director; Multiphysics Lab	5W CW laser, high-speed camera (Phantom Miro), vibration shaker/controller		www	www
Physics	Roberto Mancini	Professor of Physics; McMinn Endowed Research Prof.	1993	University of Buenos Aires (1983)	Atomic/radiation physics of HED plasmas, x-ray spectroscopy, Stark-broadened lines, radiation transport	35	128	Spectroscopic Determination of Dynamic Plasma Gradients (PRL 2002); Time-Resolved Spectroscopic Measurements in Microballoons (PRL 1989); Escape Factors for Stark-Broadened Line Profiles (J Phys B)	Plasma Spectroscopy & Atomic Physics Group	X-ray spectrometers, HED plasma facilities, radiation diagnostics, vacuum systems		www	www
Physics	Thomas White	Clemons-Magee Endowed Prof.; Assoc. Prof.	2017	University of Oxford (2015)	HED physics, laboratory astrophysics, extreme states of matter, laser-plasma interactions	58	1441	Heating gold to 19,000K without losing crystalline structure (Nature); Fourier heating in HED plasmas (Nature Comms); NSF CAREER; uses NIF, LCLS, European XFEL	High Energy Density Lab (HEDL); Lab Astrophysics Group	High-power lasers, X-ray free-electron lasers (XFEL), NIF access, plasma diagnostics, shock drivers	World-class pulsed power facility (Zebra); unique in US; Physics olympiad alignment. Active.	www	www
Physics	Wendy Calvin	Foundation Professor & Chair of Geological Sciences	2001		Planetary science, Mars geology, mineral spectroscopy, surface composition	49	115	Mars surface mineralogy from orbital spectroscopy data Fifteen years of Mars rover science team contributions Layered deposits of Mars polar ice caps as climate	Mars Exploration Rover science team; Mars Reconnaissance Orbiter	Spectroscopy, Mars rover data, remote sensing, mineralogical references	Mars rover scientist; planetary science; spectroscopy alignment with SIL; Astronomy bridge. Active.		www
Physics	Yan Wang	Associate Professor of Mechanical Engineering	2016	UNR College of Engineering	Thermal science, heat transfer, phonon transport, nanoscale thermal transport, laser manufacturing	200	5296	Selective Phonon Stimulation Mechanism to Tune Thermal Transport Phonon Lateral Confinement Enabling Thermal Rectification in Asymmetric Nanostructures First principles calculations of lattice thermal	ME; ASME	Laser manufacturing systems, computational thermal modeling		www	www
Astronomy	Kelly Kosmo O'Neil	Teaching Assistant Professor of Physics & Astronomy	2023	UCLA (2023)	Galactic center dynamics, supermassive black holes, orbital dynamics, exoplanets	17	83	Relativistic redshift of S0-2 orbiting Galactic center SMBH (Science 2019, co-author); Primordial black holes (2023-2025); Orbital eccentricities of directly imaged companions	UCLA Galactic Center Group (affiliated)	Telescope access, adaptive optics data, astrometry software, spectroscopic data			www

Astronomy	Richard M. Plotkin	Associate Professor of Physics & Astronomy; Acting Physics Chair	2011	University of Washington (2009)	Black hole accretion, multiwavelength X-ray astronomy, relativistic jets, AGN, quasars	2	186	Photometry+: Pipeline for Great Basin Observatory (A&C 2022); Radio Jets from Quiescent BH XRBs (MNRAS 2021); Decay of V404 Cygni: Disk-Jet Coupling (ApJ 2017)	UNR Black Holes Group; Great Basin Observatory	Telescopes (GBO 0.7m, MacLean 22"), CCD cameras, photometry pipelines, X-ray satellite data	Great Basin Observatory PI; direct astronomy olympiad alignment; accessible	www	www
Chemistry	Benjamin T. King	Professor of Chemistry; Fuson Endowed		University of Colorado (2000)	Carborane chemistry, fluorine chemistry, weakly coordinating anions, macromolecular architecture	20	252	Dodecamethylcarba-closo-dodecaboranyl (JACS); Scholl reaction and 2D polymer research; Computational and X-ray crystallography	King Group	X-ray crystallography, NMR, glovebox (air-free), mass spectrometry, computational clusters	Active	www	www
Chemistry	David Hanigan	Associate Professor of Civil & Environmental Engineering		UNR College of Engineering	Environmental engineering, water treatment, water quality, PFAS, disinfection byproducts, N-nitrosamines	31	632	Disinfection byproducts research in water treatment PFAS contamination and remediation studies N-nitrosamine formation and control in water treatment	CEE	LC-MS, GC-MS, water treatment pilot systems		www	www
Chemistry	Dev Chidambaram	Professor of Chemical & Materials Engineering	2009	UNR College of Engineering	Corrosion science, electrochemistry, molten salt research, high-temperature materials, environmental remediation	54	180	Duplex Mechanism for Chromate-Hydrated Oxide Interaction on Aluminum Alloys (J Electrochem Soc) Ti-48Al-2Cr-2Nb alloy in molten salts at 850C for aerospace Molybdate-based coating for depleted uranium	CME Assoc. Chair; Electrochemical Society	SEM, XRD, XPS, synchrotron spectroscopy, Raman spectroscopy	Direct SIL alignment: uses SEM, XRD, XPS, Raman; corrosion and electrochemistry map to Chemistry; $20M funding	www	www
Chemistry	Matthew J. Tucker	Professor of Chemistry; Graduate Director	2011	University of Pennsylvania (2006)	Ultrafast spectroscopy, 2D IR spectroscopy, protein folding/ binding, biophysics	4	67	Unraveling Hydration Shell Dynamics via 2D IR Spectroscopy (JACS 2024); The Long and Short of Coupling/Uncoupling via 2D IR (J Phys Chem B 2024); Amide I 2D IR of Proteins (Acc Chem Res)	Tucker Research Group; Hitchcock Center (co-director)	Femtosecond lasers, FTIR spectrometers, 2D IR setup, optical tables, cryostats	FTIR/spectroscopy directly uses SIL instruments; biophysics bridge. Toys list.	www	www
Chemistry	Ming Chen	Assistant Professor of Chemical & Materials Engineering		UNR College of Engineering	Advanced alloys, laser additive manufacturing, metallic materials, high-entropy alloys	130	5203	Laser additive manufacturing of metallic alloys High-entropy alloy design and characterization Advanced materials processing	CME	Laser AM systems, SEM, XRD, mechanical testing		www	www
Chemistry	Pradeep Menezes	Associate Professor of Mechanical Engineering	2015	UNR College of Engineering	Tribology, surface engineering, advanced manufacturing, composite materials, friction and wear	141	3551	Tribology for Scientists and Engineers (book) Tribology of Additively Manufactured Materials (Elsevier) Tribology of MXene Materials: Advances, Challenges, and Future Directions	ME; ASME; founding editor Tribology and Interfaces (Elsevier)	Tribology testing, surface characterization, SEM, profilometry	16,000 citations with h-index 60; top 2% worldwide; surface characterization aligns with SIL Raman and FTIR	www	www
Chemistry	Yftah Tal-Gan	Professor of Chemistry	2014	Hebrew University of Jerusalem	Chemical biology, bacterial quorum sensing, peptide chemistry, anti-bacterial strategies	26	199	Designing Cyclic CSP-Based Quorum-Sensing Modulators (ACS Infect Dis 2024); Targeting Peptide-Based QS for Gram-Positive Infections (Peptide Sci 2023); NIH/NSF funded peptide research	Tal-Gan Research Group	Peptide synthesizer, HPLC, LC-MS, MALDI-TOF, microplate readers, cell culture	Chemical biology; peptide synthesis; uses SIL LC-MS and MALDI; open to undergrads	www	www
Chemistry	Yu (Frank) Yang	Associate Professor of Civil & Environmental Engineering		UNR College of Engineering	Water science, environmental engineering, emerging contaminants, water treatment	18	27	Emerging contaminants in water systems research Environmental chemistry and water treatment Water quality monitoring and remediation	CEE	LC-MS, water quality analyzers, environmental sampling	5,700 citations; water science aligns with Chemistry; LC-MS use connects to SIL instruments	www	www
Biology	Ben Ma	Assistant Professor of Civil & Environmental Engineering		UNR College of Engineering	Environmental engineering, water treatment, pathogen control, UV disinfection, biofouling, water reuse	26	967	UV disinfection systems for water treatment Pathogen control in water reuse systems Biofouling mitigation research	CEE	UV disinfection equipment, microbiology lab, water quality analyzers	Active	www	www
Biology	Christopher Von Bartheld	Professor of Physiology & Cell Biology		UNR School of Medicine	Neuroscience, neuroanatomy, neuron counting methods, brain cell quantification	30	735	Systematic review of neuron numbers in the human brain Stereological methods for neuron counting Neuroanatomy and brain structure research	Physiology & Cell Biology	Stereology equipment, histology, microscopy	Active	www	www
Biology	Dennis Mathew	Professor of Biology; Assoc. & Associate Chair	2014	UMass Amherst (2006)	Neuroscience of olfaction, insect neuroscience, Drosophila olfaction, neuromodulation	12	52	Insect olfaction and neural circuits (NSF 2024); Drosophila olfactory neuromodulation; NIH ENDURE training program director	Mathew Lab; Integrative Neuroscience Program	Drosophila culture, electrophysiology rigs, fluorescence microscopy, behavioral arenas, optogenetics	Drosophila accessible model; NIH training program for undergrads; neuro olympiad prep. Github.	www	www
Biology	Elizabeth Pringle	Assoc. Prof.; McMinn Endowed Research Prof.	2016	Stanford University (2011)	Evolutionary ecology, plant-animal interactions, chemical ecology, dryland ecosystems	17	52	Remote sensing reveals importance of habitat on aphid biocontrol (2024); Evolutionary ecology of mutualisms; Chemical ecology of dryland plants	The Pringle Lab	Field equipment, remote sensing data, chemical analysis tools, ecological software	Active	www	www
Biology	Floris van Breugel	Assistant Professor of Mechanical Engineering		UNR College of Engineering	Insect flight biomechanics, neural control of movement, bio-inspired robotics, neuroethology	35	313	Insect flight dynamics and neural control Bio-inspired aerial robotics Olfactory navigation in flying insects	ME; Institute for Neuroscience	High-speed cameras, wind tunnel, motion capture, insect flight arena	Insect flight + neuroethology bridges Biology and Computing; bio-inspired robotics is interdisciplinary	www	www
Biology	Jennifer Hoy	Assoc. Prof.; Director Institute for Neuroscience		University of Oregon	Visual neuroscience, prey capture behavior, neural circuits, sensory systems	9	41	Neural circuits underlying prey-capture in mice; Binocular vision in predatory behavior; NIH RO1 (~$2M/5yr)	Hoy Lab; Institute for Neuroscience	Electrophysiology, optogenetics, 2-photon microscopy, behavioral tracking, mouse colony		www	www
Biology	Jenny Ouyang	Assoc. Prof.; EECB Graduate Program Director	2016	Princeton University (2012)	Urban ecology, artificial light pollution, physiological adaptation, circadian biology	37	244	Effects of artificial lighting on birds; NSF CAREER ($1.2M) for light pollution; Endocrinology and animal behavior	Ouyang Lab	Light sensors, hormone assay equipment, field monitoring stations, spectroradiometers	NSF CAREER; accessible field biology; bridges biology+physics via light/ circadian	www	www
Biology	John Cushman	Foundation Professor of Biochemistry & Molecular Biology	2000		CAM photosynthesis, drought stress tolerance, molecular genetics, plant biotechnology	29	367	Crassulacean acid metabolism: a plastic adaptation to arid environments The agave genome reveals core features of CAM Engineering CAM for sustainable food and biofuel production	Biochemistry & Molecular Biology; AAAS Fellow (2023)	Real-time PCR, gene expression analysis, greenhouse, spectrophotometry	AAAS Fellow; Foundation Professor; CAM photosynthesis; plant biotechnology. Active.	www	www
Biology	Krishna Pagilla	Foundation Professor of Civil & Environmental Engineering		UNR College of Engineering	Water treatment, wastewater, water reuse, biological treatment, nutrient removal	50	573	Biological wastewater treatment and nutrient removal Water reuse systems and advanced treatment Nevada Water Innovation Institute research	CEE; ASCE Fellow; NV Water Innovation Institute Director	Wastewater treatment pilot systems, biological reactors, water quality analyzers		www	www
Biology	Lee Dyer	Foundation Professor of Biology; EECB Director	2010	University of Colorado Boulder (1994)	Chemical ecology, tropical biodiversity, plant-herbivore interactions, conservation biology	77	1192	Phytochemical diversity drives tropical plant-insect diversity (PNAS 2015); Trait-mediated trophic cascade for hummingbirds (Sci Advances 2015); New dimensions of tropical diversity (2014)	EECB Program; Hitchcock Center (affiliated)	GC-MS, LC-MS (chemical ecology), field equipment, specimen collections, tropical stations	Foundation Professor; Chemical ecology uses GC-MS/LC-MS at SIL; Hitchcock Center	www	www
Biology	Maryam Raeeszadeh-Sarmazdeh	Associate Professor of Chemical & Materials Engineering	2019	UNR College of Engineering	Protein engineering, synthetic biology, directed evolution, enzyme inhibitors for neurodegeneration and cancer	22	152	Protein Language Models for Low-N Engineering of Metalloproteinase Inhibitors (IEEE) Engineering TIMP-1 for Fine Discrimination Between MMP-3 and MMP-10 Tissue Inhibitors of Matrix Metalloproteinases for	CME; NIH	Protein expression systems, directed evolution platforms, molecular characterization	Protein engineering for cancer and neurodegeneration is core Biology; NSF CAREER + NIH funded; bridges	www	www
Biology	Matt Forister	Foundation Prof.; McMinn Endowed Research Prof.	2008		Plant-insect ecology, butterfly ecology, diversification, diet breadth evolution	7	54	Rapid butterfly declines across the US (Science 2025); Monitoring, global change, specialization, extinction; Phytochemical and insect community diversity	Great Basin Bug Lab	Field collection equipment, specimen collections, molecular tools, ecological software	Very high impact (Science 2025 paper); accessible fieldwork; biodiversity+conservation. Active	www	www
Biology	Peter Jones	Associate Professor of Pharmacology		Emory	FSHD, epigenetic mechanisms, DNA methylation, muscle development and disease	109	3763	The genetics and epigenetics of FSHD Epigenetic diagnostics for FSHD1 and FSHD2 FSHD animal models and novel epigenetic diagnostic cassettes	Wellstone Center; Mick Hitchcock Endowed Chair of Medical Biochemistry	Epigenetic analysis, DNA methylation assays, animal models	Exceptionally high impact (15k citations); epigenetics; muscular dystrophy center	www	www
Biology	Sarah M. Haigh	Associate Professor of Psychology		UNR College of Liberal Arts	Sensory processing, neurological responses to stimuli, schizophrenia, autism, migraine, TBI	39	256	Sensory processing and neural excitability in schizophrenia Visual perception and migraine research Autism spectrum sensory processing studies	Psychology; Cognitive & Brain Sciences; Institute for Neuroscience	EEG, fMRI, psychophysics equipment, eye tracking	Directs the Cognitive & Brain Science PhD program; bridges neuroscience and computing with sensory	www	www
Biology	Seungil Ro	Professor of Physiology & Cell Biology		UNR School of Medicine	Diabetes, smooth muscle biology, microRNA, translational research	44	1006	Diabetes and smooth muscle dysfunction research MicroRNA regulation in GI physiology Translational diabetes research	Physiology & Cell Biology	Molecular biology, microRNA analysis, mouse models		www	www

Biology	Steven Frese	Assistant Professor of Nutrition & Microbiology	2020		Gut microbiome, food biotechnology, nutritional science, infant health, probiotic development	44	1514	Breastfeeding, immune development, and infant microbiome composition Biotechnology approaches to improving infant nutrition and health Microbiome-based interventions for malnourished	Nutrition; School of Medicine	DNA sequencing, microbiome analysis, fermentation equipment		www	www
Biology	Sudeep Chandra	Professor of Biology; Director Global Water Center		UC Davis (2003)	Lake ecology, limnology, mountain lake dynamics, aquatic conservation, fisheries	72	1802	Lake metabolism and mountain lake systems; Castle Lake Research Station director; NSF Ecosystem Sciences Program Director	Aquatic Ecosystems Analysis Lab; Global Water Center; Ozmen	Water quality probes, CTD profilers, boats, field sampling equipment, isotope analysis		www	www
Biology	Xiaoshan Zhu	Professor of Electrical & Biomedical Engineering	2009	UNR College of Engineering	Nanomaterials for biosensing and imaging, MEMS-integrated sensory systems, health-care monitoring			Novel TB test development using quantum dots (NSF Phase 2) Biosensing research utilizing manganese-doped quantum dots Smartphone-based health diagnostic technology	EBME; Biomedical Engineering	MEMS fabrication, fluorescence spectroscopy, nanomaterial synthesis	Biosensing + nanomaterials directly aligns with SIL fluorescence and MALDI instruments; health	www	www
Biology	Yifei Jin	Assistant Professor of Mechanical Engineering	2019	UNR College of Engineering	3D bioprinting, additive manufacturing, soft materials, hydrogels, stimuli-responsive materials			Multiscale embedded printing of engineered human tissue and organ equivalents (PNAS, 2024) Self-Supporting Nanoclay as Internal Scaffold for Direct Printing of Soft Hydrogel Structures Research on 3D bioprinting of uterine and heart	ME; Biomedical	3D bioprinting systems, materials characterization	3D bioprinting of human tissues is cutting-edge Biology+Engineering; published in PNAS; direct relevance to biomedical	www	www
